

Ferns and Petals (FNP) Sales Analysis Dashboard

Excel-Based Business Intelligence Project

Project Overview

This project focuses on analysing sales data from **Ferns and Petals (FNP)**, a gifting company that delivers products for multiple occasions such as **Diwali, Raksha Bandhan, Holi, Valentine's Day, Birthdays, and Anniversaries**.

The objective of this analysis is to convert raw transactional data into **meaningful business insights** using **Microsoft Excel's advanced analytics and visualization features**. The final output is an **interactive dashboard** that helps stakeholders monitor sales performance, customer behaviour, and product trends.

Business Problem Statement

Ferns and Petals operate across multiple cities, product categories, and occasions. The company requires a consolidated view to:

- Track overall revenue and order volume
- Understand which occasions and products drive the highest sales
- Analysed customer spending patterns
- Identify top-performing cities
- Monitor order and delivery timelines

This dashboard aims to provide **data-driven insights** to support better decision-making.

Dataset Description

The dataset contains anonymized sales data with the following key attributes:

- Order ID
- Order Date & Delivery Date
- Occasion
- Product Category & Product Name
- City
- Order Quantity
- Revenue

The dataset was cleaned and transformed before analysis to ensure accuracy and consistency.

Tools & Technologies Used

This project was built entirely using **Microsoft Excel**, leveraging the following tools:

- **Power Query Editor**
 - Data cleaning and transformation
 - Handling missing values
 - Data formatting and preprocessing
 - **Power Pivot**
 - Data modelling
 - Creating relationships between tables
 - Managing calculated measures
 - **Pivot Tables**
 - Aggregating sales, orders, and revenue
 - Grouping data by time, city, product, and occasion
 - **Pivot Charts**
 - Visualizing trends and comparisons
 - Creating dynamic and interactive charts
 - **Slicers & Timelines**
 - Filtering data by occasion and date
 - Enhancing interactivity of the dashboard
-

Key Performance Indicators (KPIs)

The dashboard highlights the following KPIs:

- **Total Orders:** 1000
- **Total Revenue:** ₹35,20,984
- **Average Order Delivery Time:** 5530
- **Average Customer Spend:** ₹3,520.98

These KPIs provide a quick snapshot of overall business performance.

Dashboard Analysis & Insights

- ◆ **Monthly Sales Performance**
 - Sales fluctuate across months, indicating seasonality.
 - Higher revenue is observed during major festive periods.

◆ Revenue by Occasion

- Occasions like **Anniversary** and **Raksha Bandhan** contribute significantly to total revenue.
- Occasion-based sales trends help in planning targeted marketing campaigns.

◆ Revenue by Product Category

- Categories such as **Colors** and **Soft Toys** generate higher revenue.
- Product mix plays a crucial role in overall profitability.

◆ Top Products by Revenue

- A small set of products contributes a large portion of total sales.
- Identifying these products helps optimize inventory and promotions.

◆ Top Cities by Number of Orders

- Certain cities consistently place higher numbers of orders.
- These cities represent key markets for business expansion.

◆ Revenue by Order Time

- Revenue distribution by hour highlights peak ordering times.
- Useful for operational and delivery planning.

Analysis Dashboard

Dashboard Features

- Fully interactive dashboard built using Pivot Tables and Charts
 - Slicers for dynamic filtering by occasion and date
 - Clean and user-friendly layout
 - One-page consolidated business view
-

Business Value

This dashboard helps the business to:

- Identify high-performing products and occasions
 - Improve customer targeting strategies
 - Optimize delivery planning
 - Monitor sales performance efficiently
 - Support data-driven decision-making
-

Key Learnings

- Hands-on experience with **Power Query and Power Pivot**
 - Strong understanding of **data modeling in Excel**
 - Ability to design **interactive dashboards**
 - Translating business questions into analytical insights
-

Conclusion

The Ferns and Petals Sales Analysis Dashboard demonstrate how **Microsoft Excel** can be effectively used as a **business intelligence tool**. By combining data transformation, modeling, and visualization, this project delivers actionable insights that support strategic decision-making.
